

HIV TESTING SAVES LIVES

THERE ARE 4 REASONS WHY PEOPLE ARE
STILL DYING OF ADVANCED HIV IN THE UK:

- 1** They do not consider themselves at risk and therefore have not been tested.
- 2** HIV testing is not routinely offered in GP practices or hospitals.
- 3** One in four people (>25,000) infected with HIV in the UK remain undiagnosed.
- 4** If undiagnosed they cannot receive life-saving treatment and can unknowingly infect others.

Could your next patient's symptoms be related to HIV? Think about it and recommend testing...

**SAVING
LIVES**
