

Guide How to Task another SystemOne Unit e.g. Community Nursing

To task another SystemOne unit, these tasks have to be **patient specific**, and the patient has to be registered for care within the unit you wish to task. **NB:** Organisational Preferences will need to be checked/changed to enable tasking within the new enhanced data sharing model. Within SystemOne navigate to the Set-up menu > users and policies>Organisation Preferences – expand  Clinical Policy and select  Sharing (Enhanced) and ensure the  is de-selected for **Do not allow tasks to be sent from or to this unit if the patient has not consented to sharing**

1.  for your patient
2. Select the  button (usually on your standard toolbar)
3. Select the Community unit you wish to task using the drop down for:
 **(NB: If the Community Nursing unit is not available, it may imply that the patient is no longer registered for care at that unit)**
4. Select the User group  (if you are unsure if it's the correct user group, select the  button, this will list all the users associated with this user group). **NB:** Please note that within our locality rules have been applied within the community units to automatically assign to the correct Caseload Team, even if you have left this option as Unassigned
5. Select e.g.  type **(NB: Please note that these options may not be configured within the community units yet – this is an element of the system that needs to be addressed, therefore, the only option available may be miscellaneous)**
6. Subject must be patient specific Subject No Subject Mr Harry Potter-Sha (mandatory for these type of tasks)
7. Key in test or use your organisation /user 
8. Select the  button
9.  the record or if you select  button, you will see the following prompt
 select the  button
